LinguaLore Prototype

Design for Educational Applications

CSCI 4080U

Dr. Michael Miljanovic

March 20th, 2026

Ellycea Burke, Heather Meatherall, Kevin Chua, Ryan Warrener

Installation Guide

To install LinguaLore, download the apk file and open it on your android device.

User Guide

When a user first opens LinguaLore, they will be prompted to either create an account or log in as a guest. From there, they select their starting language, their learning goals, and other account settings. After they've set up their profile, they'll be taken to the home screen where they can select either a word match, an audio mimicry, or a conversation lesson.

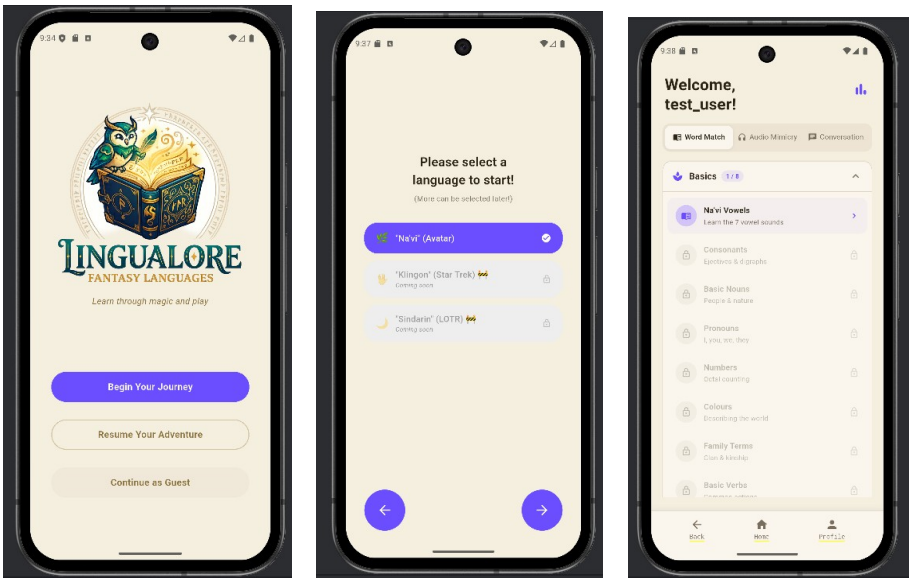

Diagram 1. The user creates an account, chooses language and settings and is taken to the home screen.

For a user selecting a word match lesson, they first select the lesson they wish to complete. They then go through slides that teach them about a specific concept. At the end there is a short quiz to test what they've learned.

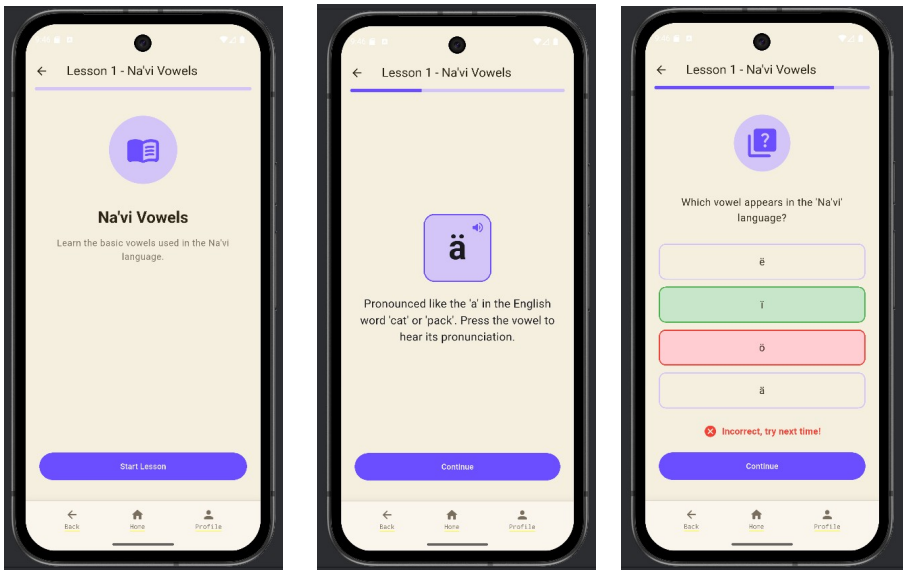

Diagram 2. The user is working through a word matching lesson.

For a user selecting an audio mimicry lesson, they first select the lesson they wish to complete. They'll be presented with each word, fearing its phonetic pronunciation and English translation. The user can then listen to the pronunciation and they try it for themselves. Once they've pronounced it correctly, they'll move on to the next one. Once this lesson is done, the user can go to their profile and see the words they practiced will be added to their word cloud.

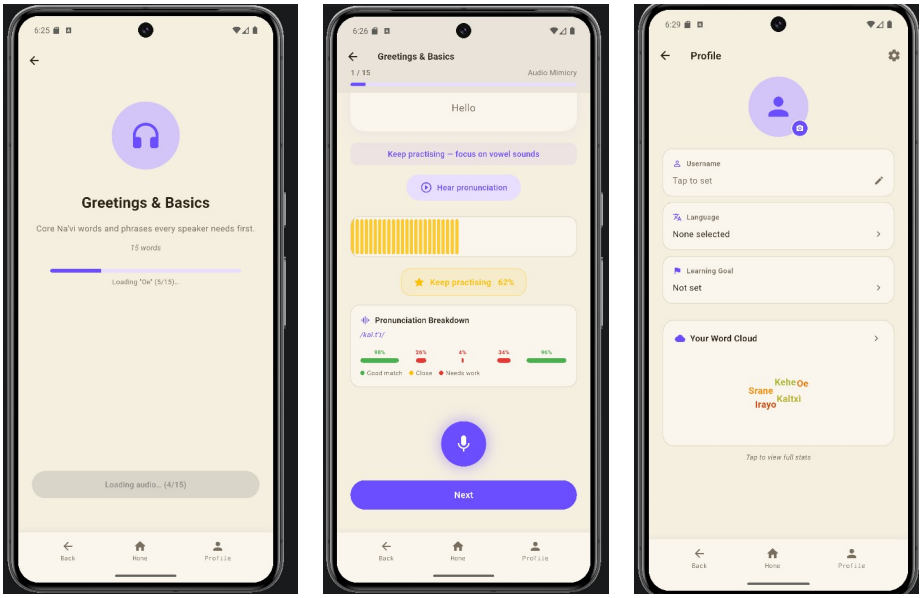

Diagram 3. The user is completing an audio mimicry lesson and their words have been added to their word cloud.

Current features

LinguaLore's main features are text lessons with various types of exercises that accompany those lessons. There are also audio mimicry lessons where the user can practice their pronunciation of a word. Users can also view their progress, with a word cloud displaying the number of words they've learned and the frequency of which they get it right.

Future Features

In the future we plan to increase the number of lessons offered in Na'vi, as well as include lessons in two other languages, Klingon from Star Trek and Sindarin from Lord of The Rings.
